1. Write a program that helps a cashier at a store find the amount of change given the amount of a purchase in dollars and cents and the amount of dollars and cents given by the customer. The answer should be in dollars, quarters, dimes, nickels and pennies.

Output:

Enter the purchase amount: 120.47
Enter the cash amount: 150
Change:
29 dollars
2 quarters
0 dimes
0 nickels
3 pennies

2. Write a program that given a temperature in Celsius calculates and prints the temperature in Fahrenheit using the formula F = (9/5) C + 32.

Output:

Enter the temperature in Celsius: 36
36 Celsius
96.8 Fahrenheit

3. Assume a party of three couples dine in a restaurant. The first family has two children. The other families have one child. Write a program that divides the bill between each family if a child is charged 3/4 of an adult share. The total charge (before tax) is given as an input. The tax is 9.5 percent and 20 percent needs to be added for service.

Output:

Enter check value:150
Total check after tax and tip : 194.25
Family 1 pays: 75.54
Family 2 pays: 59.35
Family 3 pays: 59.35

4. Write a program to create a customer's bill for a company. The company sells only three different products: TV sets, DVD players, and Remote Controllers. The unit prices are $1400.00, $220.00, $35.20 respectively. The program must read from the keyboard the quantity of each piece of equipment purchased. It then calculates the cost of each item, the subtotal, and the total cost after an 8.25% sales tax.

Output:

How many TVs were sold? 2
How many DVDs were sold? 3
How many remote controllers were sold? 4

Quantity	Description	Unit Price	Total Price
2	TV	1400.00	2800.00
3	DVD	220.00	660.00
4	Remote	35.20	140.80
Total before tax			3600.80
Tax			297.07
Total			3897.87
